

Alexander Stones

Full-Stack Developer

WORDPRESS PROJECTS (HTML, Scss, JavaScript, jQuery, MySQL, PHP) Clocktime

- Member of a team assembled to finish a museum's WordPress website that has been stuck in an unfinished and unpublishable state for approximately four years.
- Gave technical advice in the creation of an extensive design document that provides a full breakdown of proposed features and fixes.
- Will be personally working to implement web layouts and elements created by a freelance designer.

Beaulieu River Sailing Club

- Full redesign involving the construction of a custom WordPress theme, blocks, and plugins to provide the club an informational online space to update members on news and events.
- Club is committee based so additional care had to be undertaken to ensure multiple parties accepted new features and UI.
- Currently feature complete, and in the layout/design finalisation process before deployment.

Famous Publicity

<https://famouspublicity.com>

- WordPress lead generation site personally developed for a PR company.
- WordPress was chosen as a CMS due to customer needs, and the flexible development timeframe allowed for the development of a custom theme.
- Successfully deployed by myself within 24 hours of client's prior website suddenly going permanently offline due to an error by their web-hosting service.

LE WAGON PROJECTS (Ruby on Rails, HTML, CSS, Bootstrap, JavaScript, PostgreSQL, Mapbox's JSON API, GitHub, Heroku)

Mango

<https://mango-social.herokuapp.com/>

<https://github.com/Maryjay1/eatout>

- Team project to develop a social web application for localised dining meetups. Built with: **Ruby on Rails, HTML, CSS, Bootstrap, JavaScript, PostgreSQL, Mapbox's JSON API, GitHub, and Heroku.**
- Personal areas of focus were, database management, API integration at the core of app functionality, implementing a flexible layout, and project deployment.

Crash Pad

<https://crash-pad-le-wagon.herokuapp.com/>

<https://github.com/AMSTONES/crash-pad>

- Team project producing an Airbnb style letting website, utilising **Ruby on Rails, HTML, CSS, JavaScript, PostgreSQL, GitHub, and Heroku.**
